COMMENTS

Drawings

Figures 13A and 13B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Reasons For Allowance

The following is an examiner's statement of reasons for allowance: claim 1 defines a sewing machine needle comprising a shank, a blade connected to the shank, a needle point formed at an extremity of the blade, and a long groove extending from said needle eye along said blade. The needle comprises the blade as having a surface apart from the groove with a scarf, which is recessed, at a shank side of the eye. The blade includes a portion opposite the scarf including a crank protruded outwardly and an end of the needle contiguous the scarf includes a portion protruded a predetermined height from a contour of the blade. The dependent claims further limit the structure of the needle of the independent claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Pertinent Citations

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Beyer et al. Illustrates a tufting needle including a protrusion along the contour of the blade at the front of the eye. Schulz illustrates a needle including a portion at the edge of the needle protruding beyond the needle eye surface but within the contour of the blade. Kuromegawa illustrates a needle including crank protruding beyond two flattened surfaces and a portion at the edge of the needle protruding beyond the needle eye surface but within the contour of the blade. Wohnhas et al. Illustrate a needle including a protruding contour at and including the rear edge of the eye.
